

Muhammad Arif Helmi

Full Stack Developer |

+62 877-7740-3811 | helmio10394@gmail.com | [LinkedIn](#)

SUMMARY

Full Stack Developer with hands-on experience maintaining business-critical procurement systems and building SaaS, e-commerce, and operational applications. Works across ASP.NET MVC/C#, Python, Next.js, Laravel, and SQL databases, with ownership spanning user interfaces, authentication, workflows, database integration, debugging, and deployment. Combines rapid learning and technical curiosity with careful, regression-aware delivery, while actively exploring AI-assisted workflows and new technologies to improve product capability and team efficiency.

EXPERIENCE

PT Sentrakom Binatama

Full Stack Developer

2025 - Present

- Maintain and enhance an enterprise E-Procurement Management System across pre-qualification, tender invitations, vendor submissions, evaluations, negotiations, clarifications, objections, tender results, and bond management, supporting end-to-end procurement operations.
- Translate business and user requirements into approval history, reviewer tracking, role-based permissions, document validation, and status-driven interfaces, improving traceability and reducing workflow ambiguity.
- Diagnose and resolve issues across Razor views, AJAX forms, navigation states, and SQL-backed workflows while preserving established business rules, reducing regression risk and improving release stability.

PT Nexter AI

AI Annotator

2024 - 2025

- Annotated and quality-reviewed text and image datasets against project guidelines, producing consistent training and evaluation data for AI development.
- Collaborated with developers to clarify edge cases and correct labeling inconsistencies, improving dataset reliability and reducing downstream rework.

Badan Pengawas Obat dan Makanan (BPOM)

Full Stack Developer

2022 - 2023

- Built a QR-code attendance application with Laravel and MySQL across frontend and backend components, simplifying check-in and reducing manual record handling.
- Maintained databases, resolved application issues, tested features, and deployed to a cloud droplet, improving system availability and operational maintainability.

PT Telkom Akses

Data Labeling & Application Development

2016 - 2017

- Labeled Optical Distribution Point (ODP) data for telecommunications asset management, improving infrastructure data accuracy and usability.
- Developed a Visual Basic company profile application and supported content organization, testing, and UI refinement, improving information delivery and presentation quality.

EDUCATION

Universitas Muhammadiyah Jakarta

Bachelor of Engineering in Informatics Engineering

2018 - 2024

TECHNICAL SKILLS

Languages: C#, Python, PHP, TypeScript, JavaScript, Java

Backend: ASP.NET MVC, .NET, Laravel, Node.js, REST APIs

Frontend: Next.js, React.js, Razor, HTML, CSS, jQuery, AJAX

Databases & Tools: PostgreSQL, SQL Server, MySQL, Redis, Git

AI & Data: Text and image annotation, dataset quality review, AI-assisted development workflows

PROJECTS

E-Procurement Management System (EPCMS) | *ASP.NET MVC, C#, Razor, jQuery, SQL Server*

- Enhanced business-critical modules throughout the procurement lifecycle, helping internal teams manage complex tender activities through a more consistent workflow.
- Implemented approval history, reviewer progress tracking, role-based actions, document validation, and status-aware interfaces, improving decision visibility and process traceability.
- Stabilized Razor views, partial views, AJAX requests, forms, and navigation through regression-aware fixes, increasing maintainability and confidence in future releases.

CucianSiap - Laundry Management SaaS | *Python, PostgreSQL, Next.js*

- Built a full-stack subscription application for laundry owners to manage and track customer orders from intake through washing, ironing, and completion.
- Designed order-status workflows that reduce reliance on paper receipts, lower the risk of lost notes, and make it easier to provide customers with clear progress updates.
- Developed responsive interfaces, authentication, subscription payments, and plan-based access to premium features, establishing a foundation for recurring monthly revenue and scalable product growth.

Nusa Commerce Multi-Channel Management | *Javascript, React.js, PostgreSQL*

- Developed centralized inventory and order management with Shopee, Lazada, and other marketplace integrations, reducing repetitive manual updates and improving cross-channel operational visibility.
- Consolidated stock and order information into a clearer operational flow, helping users identify marketplace issues faster and creating a stronger foundation for future automation.

Chandravika Printing Website | *Laravel, MySQL, REST APIs, Online Payments*

- Built a printing e-commerce platform with authentication, REST API integration, and online payment support, enabling customers to submit and manage orders digitally.
- Optimized MySQL queries and API interactions to improve data-access efficiency, response consistency, and the overall ordering experience.

Helmizun Personal Website | *React.js, CSS, Responsive UI*

- Built a responsive personal website to present professional experience, technical capabilities, and selected projects in a clear, accessible format.
- Implemented mobile-friendly navigation, animations, and structured project showcases, improving usability while demonstrating continuous exploration of modern frontend design.
